Life Sciences Day 2022

About

Healthcare and life sciences are as fascinating as they are complex. The life sciences sector in Switzerland is regarded as having the greatest innovative strength as well as the strongest international appeal. Due to the excellent research facilities, development opportunities and the reliable regulatory framework, Switzerland provides the ideal environment for international activities and is a highly sought-after location for companies in the life sciences sector.

At the same time, healthcare and life sciences moves in a narrow regulatory corset, shaped by concerns for public health and strict efficacy and safety requirements. They are truly universal and yet, they are governed by a plethora of national, and often disparate, regulations. In determining the daily routine and the future, legal knowledge and practical experience go hand in hand.

At the Schulthess Forum Life Sciences Day on June 14, 2022, experts from all fields will have the opportunity to network and to learn about current and future legal issues related to compliance, market regulations, innovation and access, data and digitalization, challenges to globalization, political scrutiny and many more.

Take advantage of the conference environment and connect with healthcare experts, innovators, legal advisors, in-house counsels and government healthcare experts. Find out about the latest trends and solutions to international collaboration issues.

We are looking forward to welcoming you at the event.

Schulthess Forum Life Sciences Day addresses in particular: Attorneys and Lawyers, In-house counsels, Hospital legal services, Company and hospital compliance officers, Data protection officers, Life sciences investors, Regulatory consultants and anyone with an interest in current megatrends in healthcare and life sciences.

Registration and further informations: lifesciences-day.ch
